

ABHYANKAR SHARMA

Systems & Solutions Engineer | SDLC / PLC Workflows | Requirements & Validation | Test Management | Jira
Boston, MA | abhisharma873@gmail.com | linkedin.com/in/abhyankarsharma | github.com/abhyankar-sharma | F-1 OPT
Eligible (Jul 2026)

PROFESSIONAL SUMMARY

Systems and solutions engineer with four years of professional experience across the software and product development lifecycle (SDLC/PLC), backed by a Computer Science degree and an MBA in Business Analytics (Hult International Business School, July 2026). Hands-on with requirements gathering and translation, test management, validation, and bug tracking in Jira, plus database schema and data model management. Skilled at translating customer needs into scalable technical solutions, performing risk and gap analysis, and supporting design reviews and program planning. Proven track record leading workgroups, building Excel-macro and BI reporting solutions for traceability, and driving alignment across global, cross-functional teams in fast-paced environments.

CORE SKILLS

Lifecycle & Process: Software Development Lifecycle (SDLC), Product Lifecycle (PLC), process definition, milestones and workflow, design reviews, systems engineering

Requirements & Validation: Requirements gathering and translation, test content and test management, formal validation and execution, bug/defect management, traceability

Tools & Data: Jira, requirements engineering databases, database schema and data model management, SQL, Excel macros, BI and reporting methods, requirements/test/defect databases and traceability

Engineering: Solution design and architecture, software development (Python, Java, C++), data quality, usability, reliability, maintainability

Program & Risk: Program planning, schedules, timelines, resources and dependencies, risk analysis, gap identification, change management

Collaboration: Cross-functional and global team coordination, stakeholder management, Agile/Scrum, problem-solving, ownership, continuous improvement

PROFESSIONAL EXPERIENCE

Software Engineer | **Wipro Technologies** | India

Jul 2021 - Jul 2024

Fortune 500 clients (PepsiCo, Morgan Stanley) | Software & Systems Delivery

- Worked across the full software development lifecycle (SDLC), from requirements gathering and process definition through design, development, testing, validation, and release for enterprise clients.
- Gathered and analyzed customer requirements and translated them into scalable technical solutions, contributing to solution design with focus on reliability, maintainability, and data quality.
- Owned test management and validation activities, authoring and executing test cases, tracking defects and bugs in Jira, and driving issues to resolution across validation cycles.
- Designed and managed database schemas and data models that functioned as a requirements engineering database, linking requirements to test content and defects for full traceability across deliverables.
- Built Excel-macro and BI reporting solutions to consolidate status and traceability data, giving stakeholders clear visibility across the product lifecycle.
- Led coordination and startup activities for client deliverables, planning schedules, timelines, resources, and dependencies, and performing risk and gap analysis with mitigation and change-management plans.
- Identified workflow inefficiencies and drove continuous process improvements that reduced manual processing time by ~30%, communicating clearly with technical and non-technical stakeholders across global, cross-functional teams.

Data Analyst Intern | **Amorin** | Remote

Aug 2020 - Jul 2021

- Cleaned, organized, and validated datasets for analysis, supporting data collection and reporting workflows.
- Built reports and visualizations to surface trends and inform business decision-making.

TECHNICAL PROJECTS

ResumeTarget | AI SaaS Platform | Python, React

2026

- Designed and built a full-stack AI web application end to end, from requirements through development, testing, and release, using the Anthropic API with a Python backend and React front end.

KitaKapital | Fintech Credit-Scoring Solution | React, TypeScript

2026

- Built and deployed a live credit-scoring application, defining the data model and scoring logic and validating outputs against test cases before release.

Route Optimization Engine | Python | Hult MBA

2025

- Implemented a delivery route optimization model in Python using Vehicle Routing Problem (VRP) and bin-packing algorithms, reducing total route distance and cost by ~20%.

Financial Operations Dashboard | BI & Data Modeling | Hult MBA

2026

- Built a multi-page BI dashboard on a star-schema data model over 15,000+ records with 25+ measures, cutting manual reporting effort by ~40% and improving traceability for stakeholders.

EDUCATION

B.Tech, Computer Science | **DIT University** | Dehradun, India

2016 - 2020

- Core coursework: Data Structures, Algorithms, Database Management Systems, Operating Systems, Computer Networks, Software Engineering.

MBA, Business Analytics & Finance | **Hult International Business School** | Boston, MA*Expected Jul 2026*

- Relevant coursework: Business Intelligence, Data Visualization, Operations Research, Agile Project Management, Financial Modeling.

CERTIFICATIONS

- Introduction to SQL - DataCamp (May 2026)
- Foundations: Data, Data, Everywhere - Google / Coursera (Jan 2026)
- DAX Functions in Power BI - DataCamp (Mar 2026)
- Introduction to Tableau - DataCamp (2025)
- Certificate in Data Analysis - Oxford Home Study Centre (May 2024)

ADDITIONAL

- Co-Founder, Helvra (B2B solar marketplace): built demand-and-supply matching logic connecting building owners with solar installers; placed 2nd of 23 teams in the Hult Prize competition with VC interest.
- Authorization: F-1 visa with OPT eligibility beginning July 2026; able to work on-site and collaborate across global teams.
